Question 1 **Multiple Choice** **1 points**

[Modify](#) [Remove](#)

Question The nurse is caring for a client who developed an infection after admission to the hospital. This infection would be classified as a:

- Answer**
- Nosocomial infection.
 - Bacterial infection.
 - Health care-associated infection.
 - Therapeutic infection.

[Add Question Here](#)

Question 2 **Multiple Answer** **1 points**

[Modify](#) [Remove](#)

Question The nurse would use a Situation, Background, Assessment, and Recommendation (SBAR) process in which of the following situations? (Select all that apply.)

Note: Credit will be given only if all correct choices and no incorrect choices are selected.

- Answer**
- Discharging a client
 - Transferring a client to another unit
 - Contacting the primary care provider
 - Change of shift
 - Informing family members of client status

Correct Feedback **Rationale:** The SBAR is used to enhance the safety of the client in situations where nurses are communicating with other members of the health care team such as when transferring the client to another unit, conducting change-of-shift report, or contacting the primary care provider. The SBAR is not used for discharge teaching or notifying family members of the client's status.

Cognitive Level: Applying
Nursing Process: Implementation
Client Need: Safe Effective Care Environment

Incorrect Feedback **Rationale:** The SBAR is used to enhance the safety of the client in situations where nurses are communicating with other members of the health care team such as when transferring the client to another unit, conducting change-of-shift report, or contacting the primary care provider. The SBAR is not used for discharge teaching or notifying family members of the client's status.

Cognitive Level: Applying
Nursing Process: Implementation
Client Need: Safe Effective Care Environment

Question 3 **Multiple Choice** **1 points**

[Modify](#) [Remove](#)

Question The nurse is caring for a client with a medical diagnosis of HIV/AIDS admitted to the hospital with Pneumocystis carinii infection. The priority nursing intervention to reduce the spread of infection would be:

- Answer**
- Teaching the client to provide self-care.
 - Teaching respiratory/cough etiquette.
 - Teaching the use of sexual barriers.
 - Teaching the use of standard precautions.

[Add Question Here](#)

Question 4 **Multiple Answer** **1 points**

[Modify](#) [Remove](#)

Question The nurse uses which of the following with all clients to prevent the transmission of potentially infective organism among the nurse, client, and other individuals? (Select all that apply.)

Note: Credit will be given only if all correct choices and no incorrect choices are selected.

- Answer**
- Hand hygiene
 - Standard precautions
 - Personal protective equipment
 - Isolation procedures
 - Antimicrobial soap

Correct Feedback **Rationale:** The nurse should use hand hygiene, standard precautions, and personal protective equipment with all clients. Isolation procedures and antimicrobial soaps are indicated for some clients but not all.

Cognitive Level: Remembering
Nursing Process: Implementation
Client Need: Physiological Integrity

Incorrect Feedback **Rationale:** The nurse should use hand hygiene, standard precautions, and personal protective equipment with all clients. Isolation procedures and antimicrobial soaps are indicated for some clients but not all.

Cognitive Level: Remembering
Nursing Process: Implementation
Client Need: Physiological Integrity

Question 5 **Multiple Choice** **1 points**

[Modify](#) [Remove](#)

Question The nurse observing the unlicensed assistive personnel (UAP) using alcohol-based rubs for hand hygiene would recognize that further teaching is required when the UAP does which of the following?

- Answer**
- Rubs palm against palm when washing hands.
 - Applies a palmful of product into cupped hands.
 - Interlaces fingers palm to palm.
 - ✓ Dries hands with clean paper towel.

◀ [Add Question Here](#)

Question 6 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The nurse is working in a day care center for infants with special needs where there recently has been an outbreak of viral conjunctivitis. The nurse instructs the staff that the best way to stop the spread of infection is:

- Answer**
- Require all children with conjunctivitis to stay home until there is a reduction in drainage.
 - Require all children with an infection to be on otic antibiotics for at least 24 hours prior to returning to school.
 - Isolate all children with conjunctivitis in the same room away from those who are not infected.
 - ✓ Perform hand hygiene after providing personal care for all children.

◀ [Add Question Here](#)

Question 7 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The nurse would don clean disposable gloves in which of the following situations?

- Answer**
- ✓ When providing denture care
 - When bathing a client
 - When applying antiemboli stockings
 - When assessing vital signs

◀ [Add Question Here](#)

Question 8 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The nurse, working in an Emergency Department, is preparing to care for a client admitted with a traumatic amputation of the left hand. What personal protective equipment would the nurse wear?

- Answer**
- Gloves
 - Gown and gloves
 - ✓ Gown, gloves, and mask
 - Gloves and mask

◀ [Add Question Here](#)

Question 9 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The charge nurse is observing a nurse caring for a client with extensive burns. Which of the following would indicate the nurse requires further teaching regarding infection-control procedures?

- Answer**
- The nurse wears gloves and gown when dressing the client's wounds.
 - The nurse wears gloves when bathing the client.
 - The nurse wears gown, gloves, and mask when assisting the physician with debridement of the wound.
 - ✓ The nurse wears gloves when teaching a family member how to meet the client's nutritional needs after discharge.

◀ [Add Question Here](#)

Question 10 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The nurse wearing personal protective equipment would take what article off first?

- Answer**
- Gown
 - ✓ Gloves
 - Mask
 - Gloves and gown at the same time

◀ [Add Question Here](#)

Question 11 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The nurse is assisting the doctor with the insertion of a chest tube. What personal protective equipment would the nurse don?

- Answer**
- Sterile gloves, gown, and mask
 - ✓ Clean gloves, gown, and mask with eye shield or goggles
 - Sterile gloves, gown, and mask with eye shields or goggles
 - Clean gloves, gown, and mask

◀ [Add Question Here](#)

Question 12 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The nurse is called into a client's room by the unlicensed assistive personnel (UAP), who informs the nurse that the obstetric client has no pulse or respirations and has profuse vaginal bleeding. The nurse's priority action is to:

- Answer**
- Apply gloves and assess the client for pulse and respirations.
 - ✓ Assess the client for pulse and respirations, instruct UAP to notify code team while donning personal protective equipment, and begin CPR.
 - Quickly assess pulse and respirations, next assess for bleeding, call for the code team, and then apply personal protective equipment before beginning CPR.
 - Apply gown, gloves, mask, and goggles, then assess client for pulse, respirations, and bleeding.

◀ [Add Question Here](#)

Question 13 **Multiple Answer** **1 points**

[Modify](#) | [Remove](#)

Question Which of the following tasks would be appropriate for the nurse to delegate to the unlicensed assistive personnel (UAP)? (Select all that apply.)

Note: Credit will be given only if all correct choices and no incorrect choices are selected.

- Answer**
- ✓ Taking vital signs
 - ✓ Measuring and recording intake and output
 - ✓ Postmortem care
 - Providing telephone advice
 - ✓ Weighing the client

Correct Feedback **Rationale:** Tasks requiring advanced education such as assessment, interpretation of data, planning client care, or evaluating care are not delegated to the UAP. Telephone advice involves gathering data, analysis, and planning care, which would all be beyond the scope of practice. Vital sign measurement, recording intake and output, providing postmortem care, and weighing the client are all appropriate tasks to delegate to the UAP.

Cognitive Level: Remembering
Nursing Process: Planning
Client Need: Safe Effective Care Environment

Incorrect Feedback **Rationale:** Tasks requiring advanced education such as assessment, interpretation of data, planning client care, or evaluating care are not delegated to the UAP. Telephone advice involves gathering data, analysis, and planning care, which would all be beyond the scope of practice. Vital sign measurement, recording intake and output, providing postmortem care, and weighing the client are all appropriate tasks to delegate to the UAP.

Cognitive Level: Remembering
Nursing Process: Planning

[◀ Add Question Here](#)

Question 14 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The nurse observes the newly hired unlicensed assistive personnel (UAP) performing routine client care. Which of the following behaviors would indicate the UAP understands the use of personal protective equipment?

- Answer**
- The UAP removes his gown first and then his gloves after providing care.
 - The UAP applies gloves before emptying the client's indwelling catheter bag, then removes gloves and washes hands before measuring urine output.
 - ✓ The UAP applies gloves to clean the client's dentures, then removes gloves and performs hand hygiene prior to bathing the client.
 - The UAP wears gown and gloves when performing postmortem care.

[◀ Add Question Here](#)

Question 15 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The nurse is caring for a client with a deep draining abdominal wound. Which of the following factors would require the nurse to wear a mask and goggles when caring for this client?

- Answer**
- The wound is infected.
 - ✓ The client is confused and disoriented.
 - The wound is covered by wet-to-damp dressings.
 - The client is HIV-positive.

[◀ Add Question Here](#)

Question 16 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question Which of the following equipment would the nurse not place in the sharps container?

- Answer**
- Scalpels
 - Lancets
 - ✓ Bloody bandage
 - Needles

[◀ Add Question Here](#)

Question 17 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The nurse has just changed a client's dressing. Which of the following actions by the nurse would follow standard precaution guidelines for proper disposal of contaminated materials?

- Answer**
- The old dressing is discarded in the trash can.
 - The soiled disposable gown is removed and discarded in the hazardous waste container.
 - The gloves are discarded in the trash can.
 - ✓ The mask is discarded in the trash can.

[◀ Add Question Here](#)

Question 18 **Multiple Choice** **1 points**

[Modify](#) | [Remove](#)

Question The nurse working in the Emergency Department is caring for a client who has projectile vomiting. The nurse is wearing personal protective equipment (PPE). How would the nurse properly discard the PPE?

- Answer** ✓ All PPE would be discarded in the hazardous waste container whenever leaving the client's room, and new PPE would be donned when returning to the room.
- The nurse could wear the same PPE if only leaving the room briefly and discard in the hazardous waste container when the client is transferred to the floor.
 - The nurse removes the PPE and places it just inside the room to put back on when reentering the client's room, then discards into the hazardous waste container when the client is transferred.
 - If the PPE is soiled, the nurse discards it when leaving the room, but if it is not visibly contaminated, the nurse can reapply the same PPE when reentering the client's room.

[◀ Add Question Here](#)

Question 19 **Multiple Answer** **1 points**

[Modify](#) | [Remove](#)

Question When assisting the physician with an invasive procedure, the role of the nurse includes which of the following? (Select all that apply.)

Note: Credit will be given only if all correct choices and no incorrect choices are selected.

- Answer**
- ✓ Observe appropriate infection-control procedures.
 - ✓ Provide for client privacy and safety.
 - ✓ Prepare the client.
 - ✓ Monitor the client's condition throughout the procedure.
- Label and send all specimens to the lab.

Correct Feedback **Rationale:** The nurse observes appropriate infection-control procedures, provides for client privacy and safety, prepares the client for the procedure-including explaining what will happen-and then monitors the client while the physician performs the procedure. Specimens are not sent to the lab until after the procedure is completed, and this can be delegated to an unlicensed assistive personnel if the nurse is needed to care for the client.

Cognitive Level: Remembering
Nursing Process: Planning
Client Need: Safe Effective Care Environment

Incorrect Feedback **Rationale:** The nurse observes appropriate infection-control procedures, provides for client privacy and safety, prepares the client for the procedure-including explaining what will happen-and then monitors the client while the physician performs the procedure. Specimens are not sent to the lab until after the procedure is completed, and this can be delegated to an unlicensed assistive personnel if the nurse is needed to care for the client.

Cognitive Level: Remembering

Question 20 **Multiple Answer**

1 points

[Modify](#) | [Remove](#)

Question The nurse is assisting the physician insert a chest tube into a client with a hemothorax following a motor vehicle crash. Which of the following would the nurse do?
 (Select all that apply.)

Note: Credit will be given only if all correct choices and no incorrect choices are selected.

- Answer**
- Sterile gown
 - Sterile gloves
 - ✓ Mask with eye shield
 - Mask
 - ✓ Clean gown

Correct Feedback **Rationale:** The nurse would not need to don sterile gown or gloves, because the role of the nurse is to monitor the client during the procedure. However, due to the risk of splatter, the nurse would wear a gown and mask with eye shield.

Cognitive Level: Applying
Nursing Process: Planning
Client Need: Safe Effective Care Environment

Incorrect Feedback **Rationale:** The nurse would not need to don sterile gown or gloves, because the role of the nurse is to monitor the client during the procedure. However, due to the risk of splatter, the nurse would wear a gown and mask with eye shield.

Cognitive Level: Applying
Nursing Process: Planning
Client Need: Safe Effective Care Environment

[◀ Add Question Here](#)

Question 21 **Multiple Choice**

1 points

[Modify](#) | [Remove](#)

Question The nurse has assisted the physician with the collection of cerebrospinal fluid. An important safety measure for the nurse to follow immediately after collection of the sample is:

- Answer**
- Maintain sterility of the procedure tray.
 - ✓ Discard all sharps in a puncture-proof container.
 - Label specimens and send to the lab.
 - Remove PPE and discard.

[◀ Add Question Here](#)

Question 22 **Multiple Answer**

1 points

[Modify](#) | [Remove](#)

Question It is critically important for the nurse to document all client care activities in the medical record for which of the following reasons?
 (Select all that apply.)

Note: Credit will be given only if all correct choices and no incorrect choices are selected.

- Answer**
- ✓ Facilitate continuity of care.
 - ✓ Promote effective care.
 - ✓ Meet legal and accreditation requirements.
 - In order to prove what was done
 - ✓ Provide data for research and reimbursement.

Correct Feedback **Rationale:** The nurse documents to meet legal and accreditation requirements. Facilitating continuity of care by careful documentation leads to improved communication and promotes more effective care. Data from nursing documentation are used for both research and reimbursement.

Cognitive Level: Remembering
Nursing Process: Implementation
Client Need: Safe Effective Care Environment

Incorrect Feedback **Rationale:** The nurse documents to meet legal and accreditation requirements. Facilitating continuity of care by careful documentation leads to improved communication and promotes more effective care. Data from nursing documentation are used for both research and reimbursement.

Question 23 **Multiple Choice**

1 points

[Modify](#) | [Remove](#)

Question The nurse has assisted the physician with the collection of cerebrospinal fluid via a lumbar puncture, and would document all of the following except:

- Answer**
- Specimen collection and disposition.
 - ✓ Physician's contamination of first needle, requiring the nurse to obtain a second needle.
 - Client response during and after the procedure.
 - Sterile technique followed throughout the collection process.

[◀ Add Question Here](#)

Question 24 **Multiple Choice** **1 points**

[Modify](#) [Remove](#)

Question The nurse is exposed to the client's blood and body fluids via an accidental used needle stick. Which of the following would be appropriate nursing documentation of the event?

- Answer**
- Document "Nurse stuck by used needle" in the client's medical record.
 - Document "Accidental exposure of nurse to blood and body fluid" in the client's medical record.
 - There is no need to document the exposure as long as the nurse takes the proper actions and notifies the charge nurse.
 - ✓ Completion of an incident report

[◀ Add Question Here](#)

Question 25 **Multiple Choice** **1 points**

[Modify](#) [Remove](#)

Question The registered nurse effectively delegates which of the following procedures to the Unlicensed Assistive Personnel (UAP):

- Answer**
- making a nursing diagnosis.
 - ✓ assistance in helping client to bedside commode.
 - performing assessments on client.
 - giving the client pain medication.

[◀ Add Question Here](#)

Question 26 **Multiple Answer** **1 points**

[Modify](#) [Remove](#)

Question Principles guiding the nurse's decision to delegate ensure the safety and quality of outcomes. The decision to delegate requires clear communication. The nurse knows that the UAP understands all directions when stating:
(Select all that apply.)

Note: Credit will be given only if all correct choices and no incorrect choices are selected.

- Answer**
- ✓ the specified tasks to be done for each client.
 - ✓ when each task is to be done.
 - I can give the medication for you.
 - I will note all orders.
 - ✓ the expected outcomes for each tasks.

Correct Feedback

Rationale:

- this is part of the necessary communication that must occur.
- this can not be delegated.
- the expected outcomes for each tasks.

Cognitive Level: Understanding
Nursing Process: Planning
Client Need: Safe Effective Care Environment

Incorrect Feedback

Rationale:

- this is part of the necessary communication that must occur.
- this can not be delegated.
- the expected outcomes for each tasks.

Cognitive Level: Understanding
